FELIX CRYPTO EDGE

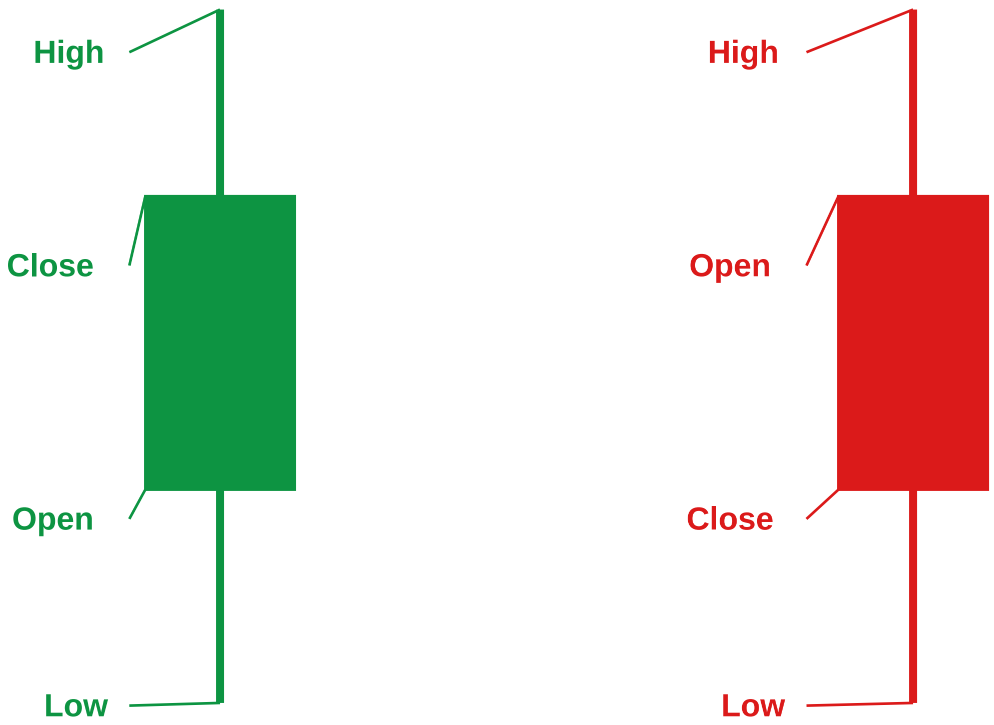
Trading for Beginners

A simple visual guide for learning crypto charts, spotting possible buy/sell zones, and avoiding the biggest beginner mistakes.

Education only. Not financial advice. Crypto trading is risky and you can lose money.

1. Candles: The Basic Building Block

A candle is just a picture of what price did during one period of time.



Green candle: price closed higher than it opened.

Red candle: price closed lower than it opene

Dummy rule

!

Do not trade from one candle alone. A candle matters most when it appears at support, resistance, or a trendline.

2. Support and Resistance

Support is where buyers may step in. Resistance is where sellers may step in.
Think zones, not perfect lines.

S

Support

A possible area to look for buyers. It can break, so risk still matters.

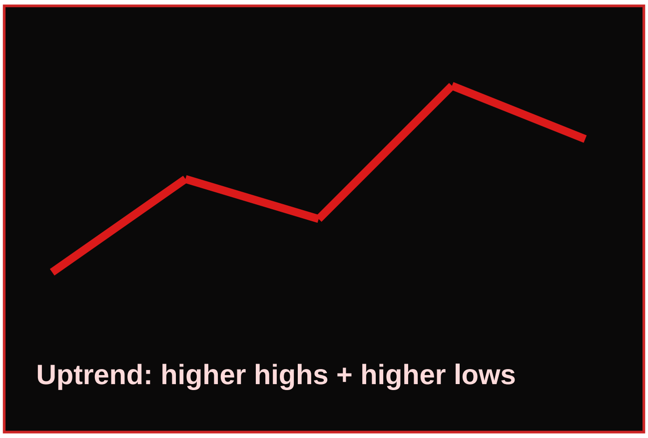
R

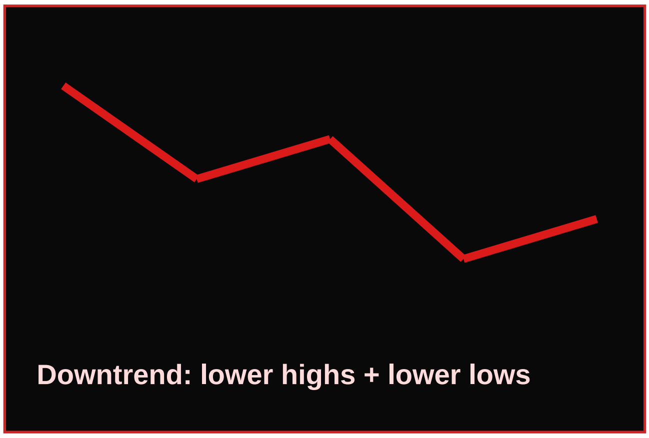
Resistance

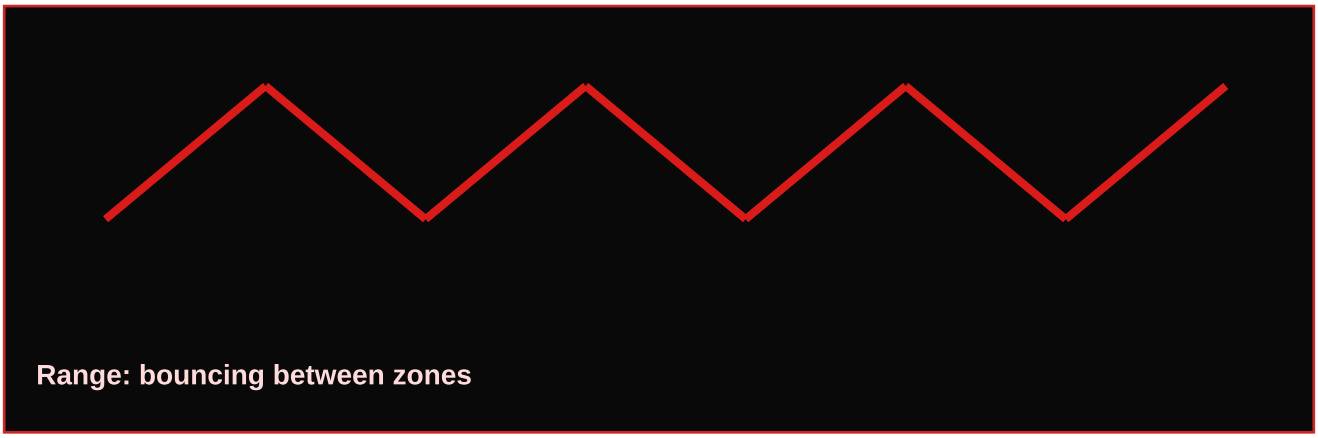
A possible area to take profit, avoid chasing, or watch for rejection.

3. Trends: Up, Down, or Sideways?

Before looking for entries, beginners should ask: what is the market doing overall?





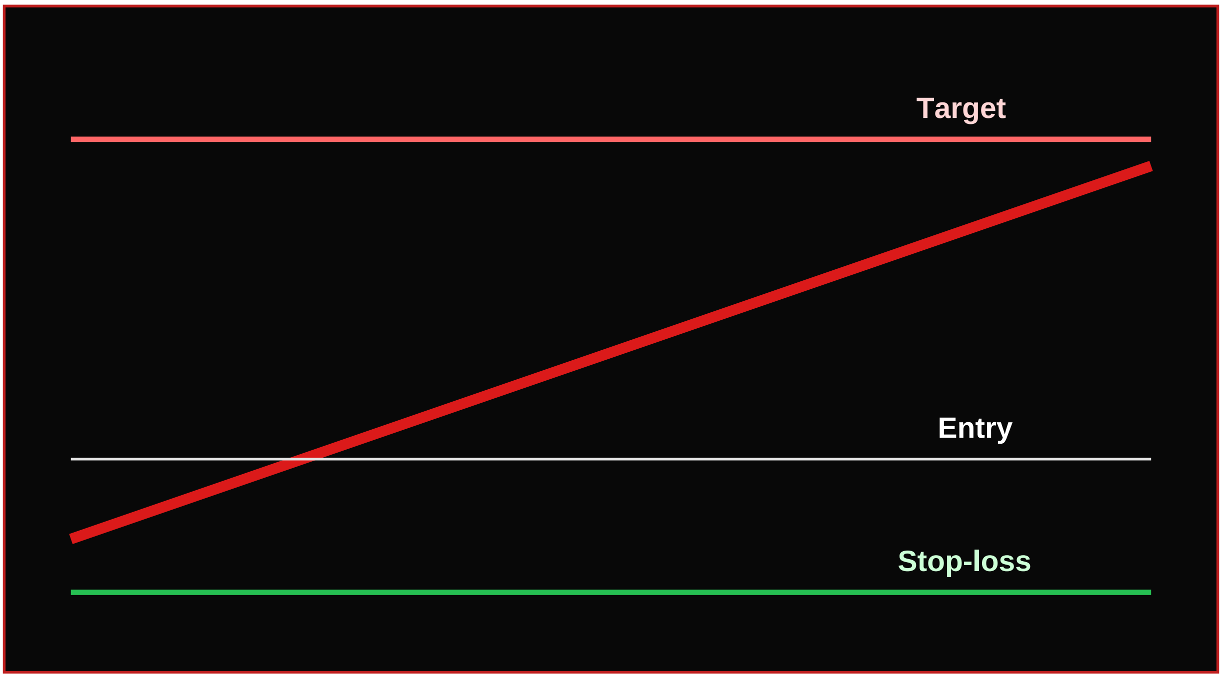


! **Dummy rule**

If you cannot tell whether the chart is trending or ranging, you probably should not trade yet. First label the market condition.

4. The Most Important Part: Risk

Beginners obsess over entries. Survivors obsess over how much they can lose if wrong.



EUR **Example**

Account: EUR1,000. Risk: 1%. Max loss: EUR10.

! **Key idea**

The stop-loss decides how big your position can be.

? **Trading for dummies rule**

A good trade is not one that must win. A good trade is one where the loss is controlled before you enter.

5. How Felix Crypto Edge Helps

The tool is not a crystal ball. It is a training wheel that helps beginners follow a process.

1 Trend
Is price moving up, down, or sideways?

2 Zones
Where did price react before?

3 Risk
Where is the idea wrong?

6. Beginner Checklist Before Any Trade

If you cannot answer these questions, skip the trade. Skipping bad trades is a skill.

1 **What coin am I trading?**

2 **What timeframe am I using?**

3 **Is the market trending or ranging?**

4 **Where is support?**

5 **Where is resistance?**

6 **Why is this entry interesting?**

7 **Where is my stop-loss?**

8 **Where is my target?**

9 **How much money am I risking?**

10 **Am I calm, or am I chasing?**

? **Final rule**

The goal is not to trade more. The goal is to trade better, smaller, and with a clear reason.

7. Mistakes That Destroy Beginners

Avoiding these mistakes can be more valuable than finding another indicator.

X FOMO buying

Jumping in after a huge green candle.

X No stop-loss

Refusing to decide where you are wrong.

X Too much size

Risking so much that one loss hurts badly.

X Signal chasing

Blindly copying strangers online.

X Revenge trading

Trying to win money back immediately.

X Too many indicators

Making the chart so messy you cannot think.

Remember: the tool supports learning. It does not remove risk.

You do not need magic signals.
You need a repeatable process.

Felix Crypto Edge is built to help beginners slow down, read charts clearly, understand risk, and learn why a trade setup might make sense.

Education only. Not financial advice.

Crypto trading is risky. You can lose money. Always use your own judgment and manage risk.
