

FELIX CRYPTO EDGE

Trading for Beginners

A simple visual guide for reading crypto charts, planning trades, avoiding FOMO, and understanding risk.

Version 0.3 clean preview

Education only. Not financial advice. Crypto trading is risky.

Read This First

This product teaches chart-reading structure. It does not tell you what to buy or promise results.

1

Education only

This guide is not financial advice, investment advice, trading advice, tax advice, or a guarantee of profit.

2

Crypto is risky

Prices can move quickly, exchanges can fail, liquidity can disappear, and you can lose some or all money you trade.

3

The tool is not a crystal ball

Felix Crypto Edge can help you organize a process. It cannot predict the future and cannot remove risk.

4

Beginner promise

Before placing any real trade, know where you are wrong, how much you can lose, and why the setup makes sense.

What You Will Learn

A plain-English path from chart basics to a repeatable practice routine.

1

Crypto trading basics

One simple lesson explained visually and in plain English.

2

Beginner mindset

One simple lesson explained visually and in plain English.

3

Candlesticks

One simple lesson explained visually and in plain English.

4

Support and resistance

One simple lesson explained visually and in plain English.

5

Trends and market structure

One simple lesson explained visually and in plain English.

6

Timeframes

One simple lesson explained visually and in plain English.

7

Indicators

One simple lesson explained visually and in plain English.

8

Entries and exits

One simple lesson explained visually and in plain English.

What You Will Learn

Continued.

9

Position sizing

One simple lesson explained visually and in plain English.

10

Example setup

One simple lesson explained visually and in plain English.

11

When to skip

One simple lesson explained visually and in plain English.

12

Felix tool workflow

One simple lesson explained visually and in plain English.

13

Checklist

One simple lesson explained visually and in plain English.

14

Common mistakes

One simple lesson explained visually and in plain English.

15

Glossary

One simple lesson explained visually and in plain English.

16

7-day practice plan

One simple lesson explained visually and in plain English.

What Crypto Trading Really Is

Trading is not guessing. It is building a repeatable decision process.

1

The wrong idea

Beginners often think the goal is to know exactly where price goes next.

2

The better idea

A trader builds a plan: trend, zones, entry, stop-loss, target, and risk.

3

Your job

You do not need to be right every time. You need to protect yourself when you are wrong.

!

Beginner rule

If you cannot explain the trade in one simple sentence, you probably do not have a trade.

Beginner Mindset

Most new traders lose because they rush, chase, and risk too much.

1

Survival first

Your first goal is not getting rich. It is staying in the game long enough to learn.

2

Structure beats emotion

Use the same checklist every time so you are not making random decisions.

3

Small risk

Risk small enough that one loss does not make you panic or revenge trade.

Candlesticks Explained Simply

A candle is a compact picture of what price did during one selected period.

Beginner rule

Do not trade from one candle alone. A candle matters most when it appears at support, resistance, or a trendline.

Support and Resistance

Support is where buyers may step in. Resistance is where sellers may step in. Think zones, not perfect lines.

1

Support

A possible area to look for buyers. It can break, so risk still matters.

2

Resistance

A possible area to take profit, avoid chasing, or watch for rejection.

Trends: Up, Down, or Sideways?

Before entries, ask what the market is doing overall.

Uptrend

Downtrend

Range

Beginner rule

If you cannot tell whether the chart is trending or ranging, do not trade yet. First label the market condition.

Timeframes Without Confusion

Start big, then zoom in. Do not jump around until you find an excuse to enter.

1

Higher timeframe

Daily or 4-hour. Use this for the big direction: uptrend, downtrend, or range.

2

Planning timeframe

4-hour or 1-hour. Mark zones and decide where a setup would make sense.

3

Entry timeframe

1-hour or 15-minute. Use only after the bigger plan is already clear.

!

Beginner rule

Check the daily or 4-hour first. If the big picture is unclear, stop.

Indicators: Helpful, Not Magic

Volume, moving averages, and RSI can support a plan, but they should not replace market structure.

1

Volume

Shows how much trading happened. A breakout with stronger volume can be more meaningful.

2

Moving averages

Smooth price. Price above major averages can suggest bullish structure; below them can suggest bearish structure.

3

RSI

Measures momentum. Above 70 can be overextended; below 30 can be oversold. It is not a standalone signal.

Risk Comes First

Beginners obsess over entries. Survivors obsess over how much they can lose if wrong.

1

Example

Account: EUR 1,000. Risk: 1%. Maximum planned loss: EUR 10.

2

Rule

A good trade is not one that must win. A good trade is one where the loss is controlled before you enter.

Position Sizing Made Simple

Risk is money, not feelings. Decide the maximum planned loss before the trade.

1

Step 1: choose account risk

Example: EUR 1,000 account and 1% risk. That means the maximum planned loss is EUR 10.

2

Step 2: measure stop distance

If entry is EUR 100 and stop-loss is EUR 95, the stop distance is EUR 5 per coin/token.

3

Step 3: calculate size

Position size = money risked / stop distance. EUR 10 / EUR 5 = 2 units.

Position size = money risked / stop distance

Smaller risk keeps your brain calmer and your account alive.

Example: Planned Long Setup

Fictional and simplified. The point is the structure, not a prediction.

1

Step 1

Trend is up on the higher timeframe.

2

Step 2

Price pulls back into a support watch zone.

3

Step 3

Stop-loss goes below the zone. Target is near next resistance.

When to Skip a Trade

A missed trade is not a loss. A forced trade can become one.

1

Price already pumped

If you are buying only because a huge green candle happened, you are probably late.

2

No clear level

If you cannot identify support, resistance, or invalidation, there is no plan.

3

Emotional state

If you are angry, scared, or desperate to win back money, step away.

!

Beginner rule

Skipping bad trades is one of the fastest ways to improve.

How Felix Crypto Edge Helps

Use the tool as a training wheel for process, not as a profit machine.

1

Trend

Is price moving up, down, or sideways?

2

Zones

Where did price react before?

3

Risk

Where is the idea wrong?

!

Beginner rule

Good tool output should make you slower and more structured, not

Beginner Checklist

If you cannot answer these questions, skip the trade. Skipping bad trades is a skill.

1

What coin am I trading?

Write a clear answer before entering the trade.

2

What timeframe am I using?

Write a clear answer before entering the trade.

3

Is the market trending or ranging?

Write a clear answer before entering the trade.

4

Where is support?

Write a clear answer before entering the trade.

5

Where is resistance?

Write a clear answer before entering the trade.

Beginner Checklist

Continued.

6

Why is this entry interesting?

Write a clear answer before entering the trade.

7

Where is my stop-loss?

Write a clear answer before entering the trade.

8

Where is my target?

Write a clear answer before entering the trade.

9

How much money am I risking?

Write a clear answer before entering the trade.

10

Am I calm, or am I chasing?

Write a clear answer before entering the trade.

Common Beginner Mistakes

Avoiding these mistakes can be more valuable than finding another indicator.

1

FOMO buying

Jumping in after a huge green candle.

2

No stop-loss

Refusing to decide where you are wrong.

3

Too much size

Risking so much that one loss hurts badly.

4

Signal chasing

Blindly copying strangers online.

5

Revenge trading

Trying to win money back immediately.

6

Too many indicators

Making the chart so messy you cannot think.

Glossary

Plain meanings for words beginners see constantly.

1

Entry

The price area where you open a trade.

2

Stop-loss

The price where you exit if your idea is wrong.

3

Target

The price area where you plan to take profit.

4

Risk/reward

Comparison between possible loss and possible gain.

5

Support

An area where price previously bounced.

6

Resistance

An area where price previously rejected.

7-Day Practice Plan

Practice without real money first. Build skill before adding pressure.

1

Day 1

Learn candles and mark highs/lows.

2

Day 2

Draw support and resistance zones.

3

Day 3

Label trend or range on 10 charts.

4

Day 4

Add moving average and RSI context.

5

Day 5

Write five fake trade plans.

6

Day 6

Review what would have failed.

7

Day 7

Create your personal checklist.

You do not need magic signals.

You need a repeatable process.

Felix Crypto Edge is built to help beginners slow down, read charts clearly, understand risk, and learn why a trade setup might make sense.

Education only. Not financial advice.

Crypto trading is risky. You can lose money.
Always use your own judgment and manage risk.
